Introduction (1/2)

- Limitations of mobile devices impose great difficulties to provide to users an option for solve complex problems (**Mobile Grid**);
- The majority of researches only allow submission and monitoring of **a task per time** from device;
- Moreover, there is necessity **to select grid resources** for applications execution;
- It is difficult to establish agreements on used terms to characterize resources and requests (**Resource Matching based Ontology**).

Introduction (2/2)

4 Jobs for resolution problem

Concepts

- Workflow:
 - represent a **execution flow** which data are passed between some tasks obeying rules previously defined.
- Ontology:
 - Ontology can be expressed as a **formal** and explicit specification from a **shared concept**.

Workflow
Submission
and
Monitoring**

Framework – Resource Selector (5/6)

Framework – Resource Selector (6/6)

Laboratório de Pesquisas em Sistemas Distribuídos

- Characteristics:
 - Flexible and extensible;
 - Resource Matching;
 - Checking information consistency;
 - Asymmetric description.

- Introduction
- Related Works
- Concepts
- Framework
- Case Study
- **Conclusions**
- Future Works

Conclusions

- The framework provides a more **coordinated** and **automated** form for executing applications in the mobile grid;
- It also allows a **flexible, extensible, transparency** way to select several shared resources (such as, programs and databases).
