# Introduction

- Monitoring Issues:
  - High data stream;
  - Generates large amount of information;
  - Answer application tasks

# Introduction

Laboratório de Pesquisas em Sistemas Distribuídos

- *Available facilities from OSCAR software environment, represents an interesting option to manage clusters of workstations.*
- *The use of wireless sensor networks has a steady increase in number of configurations and kind of utilizations.*

# Motivation

- *Design and implement a middleware prototype, which could create for a sensor network an extra facility to process tasks inside a OSCAR cluster configuration.*

# Summary

Laboratório de Pesquisas em Sistemas Distribuídos

- Introduction and Motivation
- **Sensor Networks and Cluster Computing**
- Proposed Approach
- Experiments
- Conclusion and Future Works

# Wireless Networks

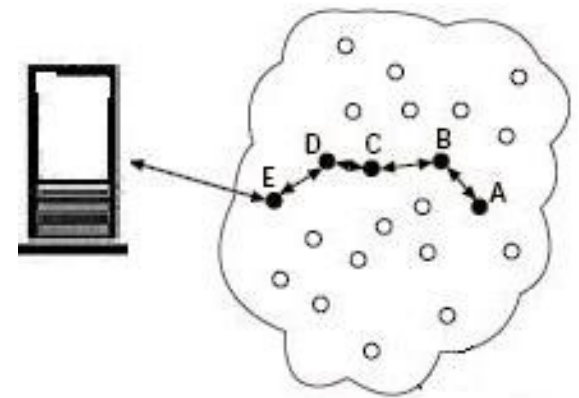

Laboratório de Pesquisas em Sistemas Distribuídos

- Provides:
  - Software mobility;
  - Faster communication;
  - Low structure cost
  
- Challenges:
  - Bandwidth;
  - limited resources;
  - frequent disconnections

# Wireless Sensor Networks

- ❑ Collect data from the environment;
- ❑ Brings new paradigms to applications;
- ❑ High deployed;
- ❑ Energy constricts;
- ❑ High information stream;
- ❑ Frequently disconnections.
- ❑ Communication routing;
- ❑ Data fusion.

# Wireless Sensor Networks

Laboratório de Pesquisas em Sistemas Distribuídos

- sensor nodes characteristics:
  - Low capacity of processor, communication and battery;
  - Functions: sensor or routing;
  - Can have a level of intelligence;
  - 1 J to transmit 1 bit
  - 0.5 J to receive 1 bit
  - 0.8 J to 208 CPU cycles

# OSCAR Cluster Computing

Laboratório de Pesquisas em Sistemas Distribuídos

- ❑ Manages globally and transparently cluster resources
- ❑ Provide some level of security, availability and tools to easy management of the environment.
- ❑ OSCAR consists of a fully integrated and easy to install software bundle designed for high performance computing cluster.

# Summary

Laboratório de Pesquisas em Sistemas Distribuídos

- Introduction and Motivation
- Sensor Networks and Cluster Computing
- **Proposed Approach**
- Experiments
- Conclusion and Future Works

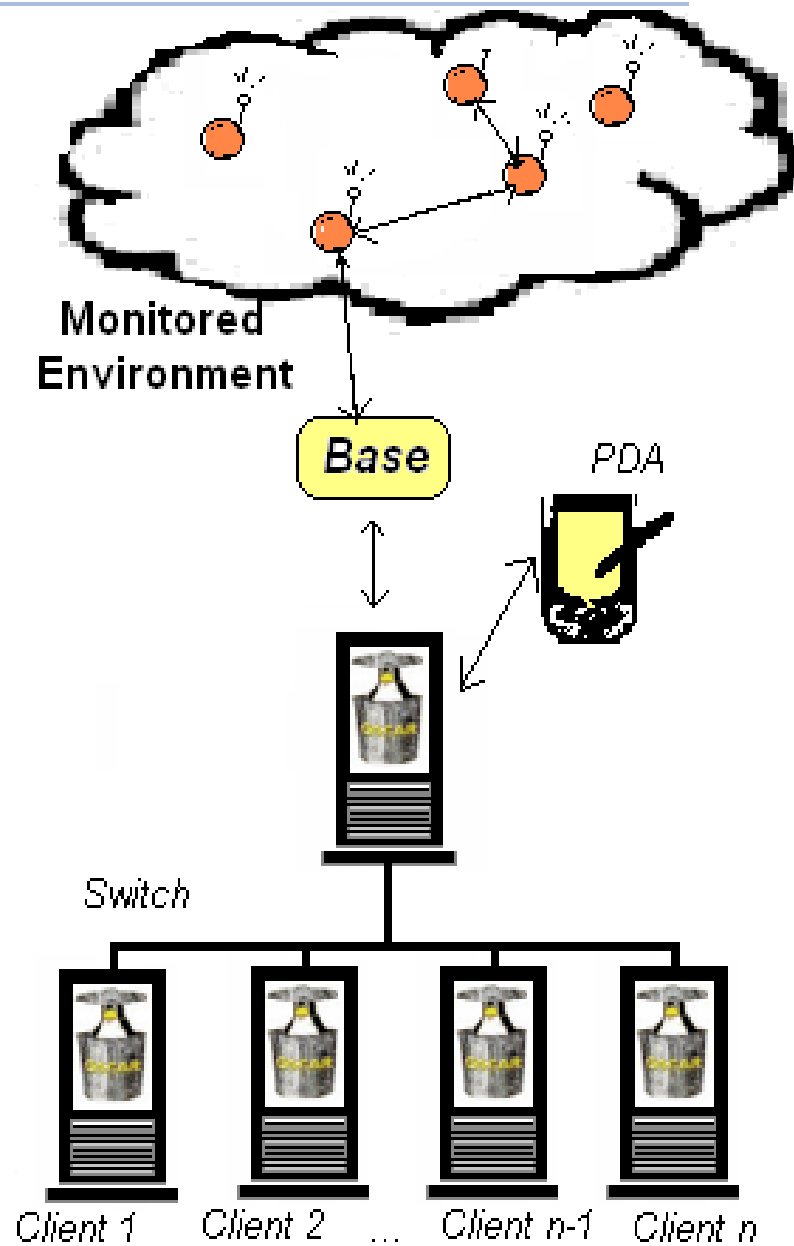

# Proposed Approach

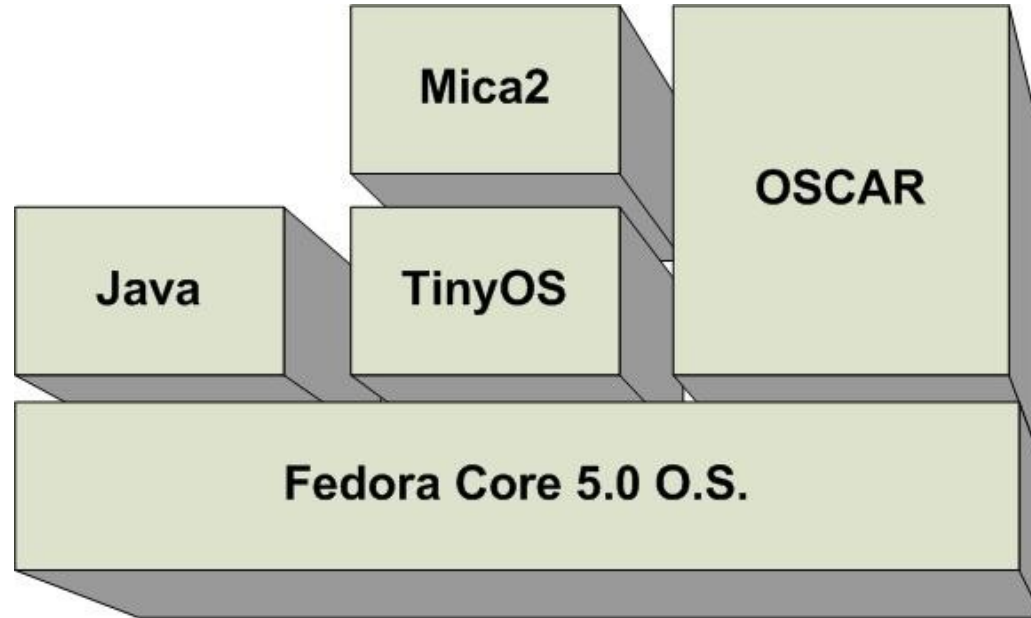

## Why integrate wireless sensor networks and Clusters?

- ❑ Sensors are densely deployed on environments;
- ❑ There is a high information stream;
- ❑ Avoid overload the system with so much data;
- ❑ Store large amount of data;
- ❑ Provides remote access
- ❑ OSCAR: a solution to cluster management

# Proposed Approach

# Environment Configuration

- TinyOS: operating system for wireless sensor networks;
- Event driven;
- handles power consumption, radio communication

# Environment Configuration

**Table 1. OSCAR Cluster Characteristics**

Master	Slave	Palm Tungsten
1.8 Ghz	1 Ghz	400 MHz
Pentium IV	Via Nehemiah	Intel XScale
512 Mb	1 Gb	64 Mb
Fedora Core 5.0	Fedora Core 5.0	Palm O.S.

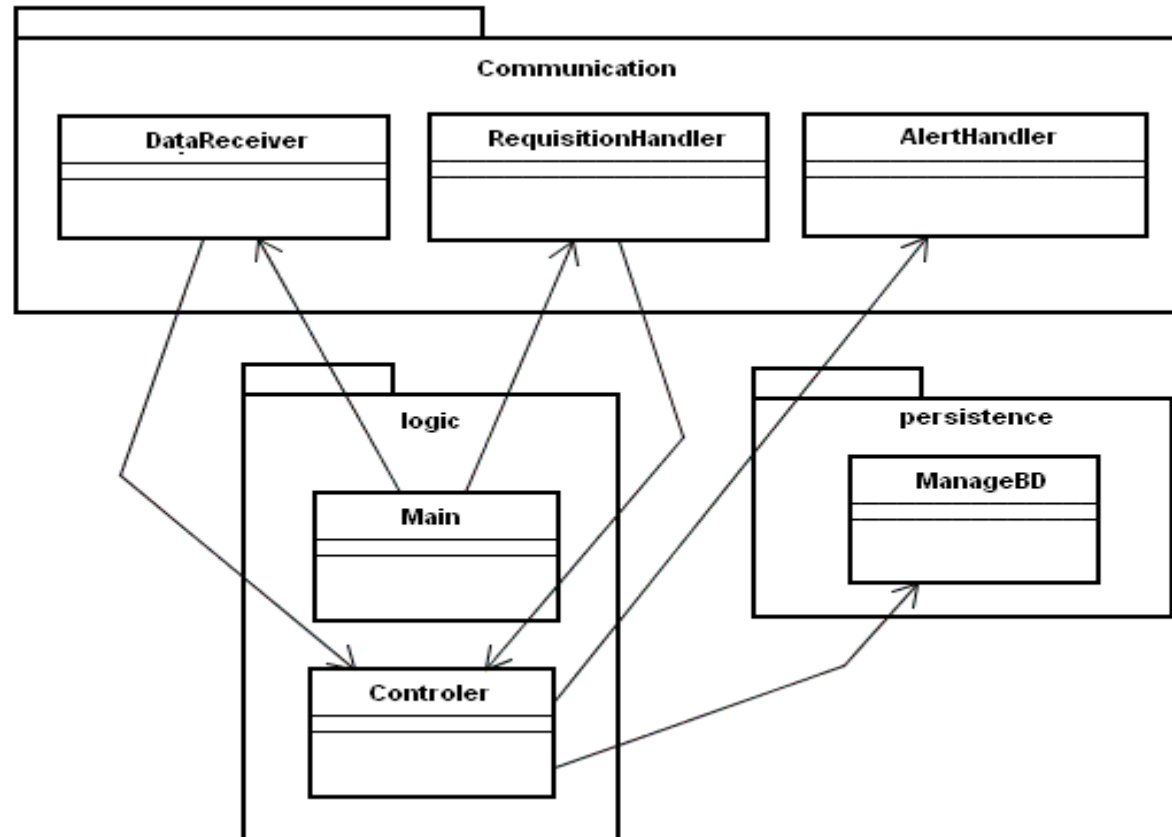

**Table 2. Wireless Sensor Network Components**

Component	Model	Radio Frequency
Sensor Node	Mica2	915 Mhz
Sensor Board	MTS300	-
Programming Board	MIB510	-

# Conclusion and Future Work

Laboratório de Pesquisas em Sistemas Distribuídos

In this article we have presented a middleware that was designed and implemented to improve the processing characteristic of a wireless sensor network through the use of the OSCAR software environment.

# Conclusion and Future Work

Our prototype considered:

- a number of motes to sensor a field in a real time;
- data are sent to a *base station* that will send the data to a OSCAR Cluster;
- after a *processing time* the *middleware* notifies *online* a mobile device.

# Conclusion and Future Work

Laboratório de Pesquisas em Sistemas Distribuídos

Challenges to be solved as a near future are:

- Test the implementation for some routing topologies of sensors;
- Enhance the alerts for different kinds of mobile devices;
- Make available the final version of the middleware for the Oscar Group.
